1. Main

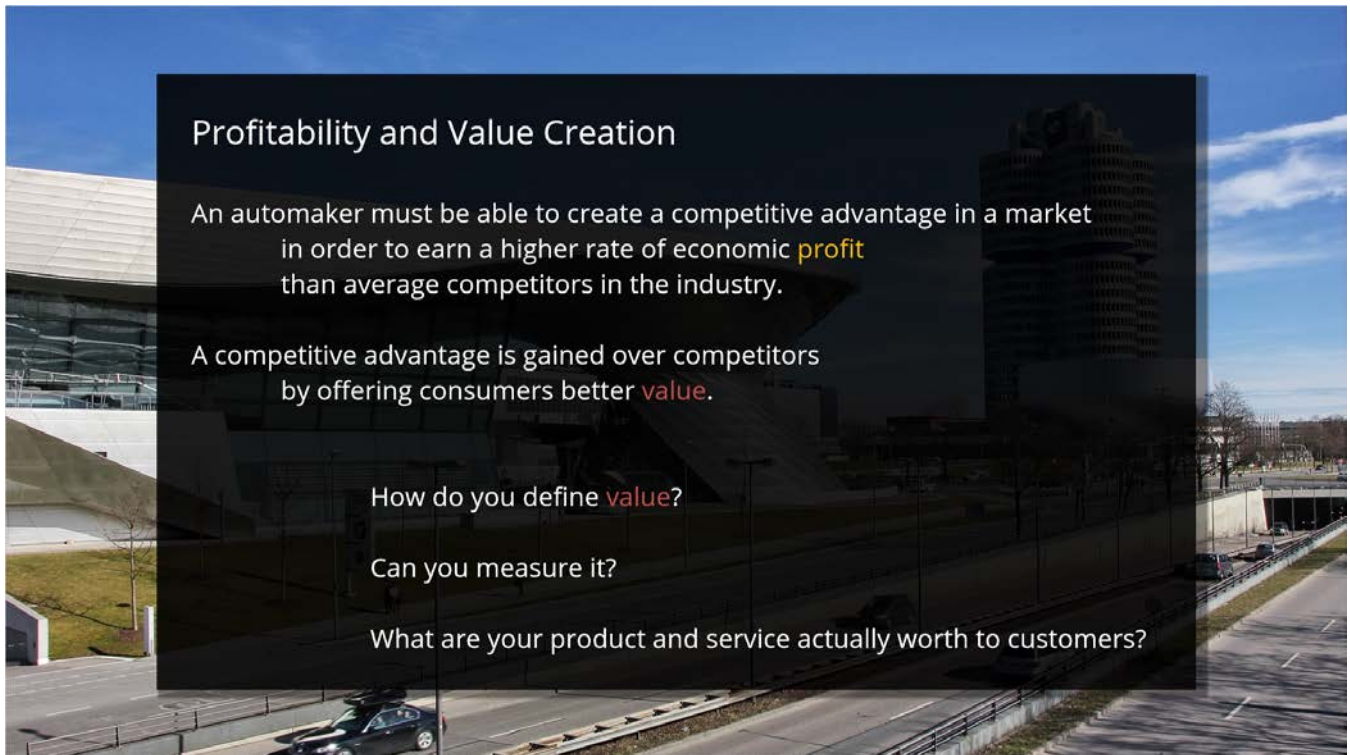

1.2 Topic title

Notes:

In this topic the professor discusses value creation with reference to the automobile industry.

1.3 Introduction

Notes:

An automaker must be able to create a competitive advantage in a market in order to earn a higher rate of economic profit than average competitors in the industry.

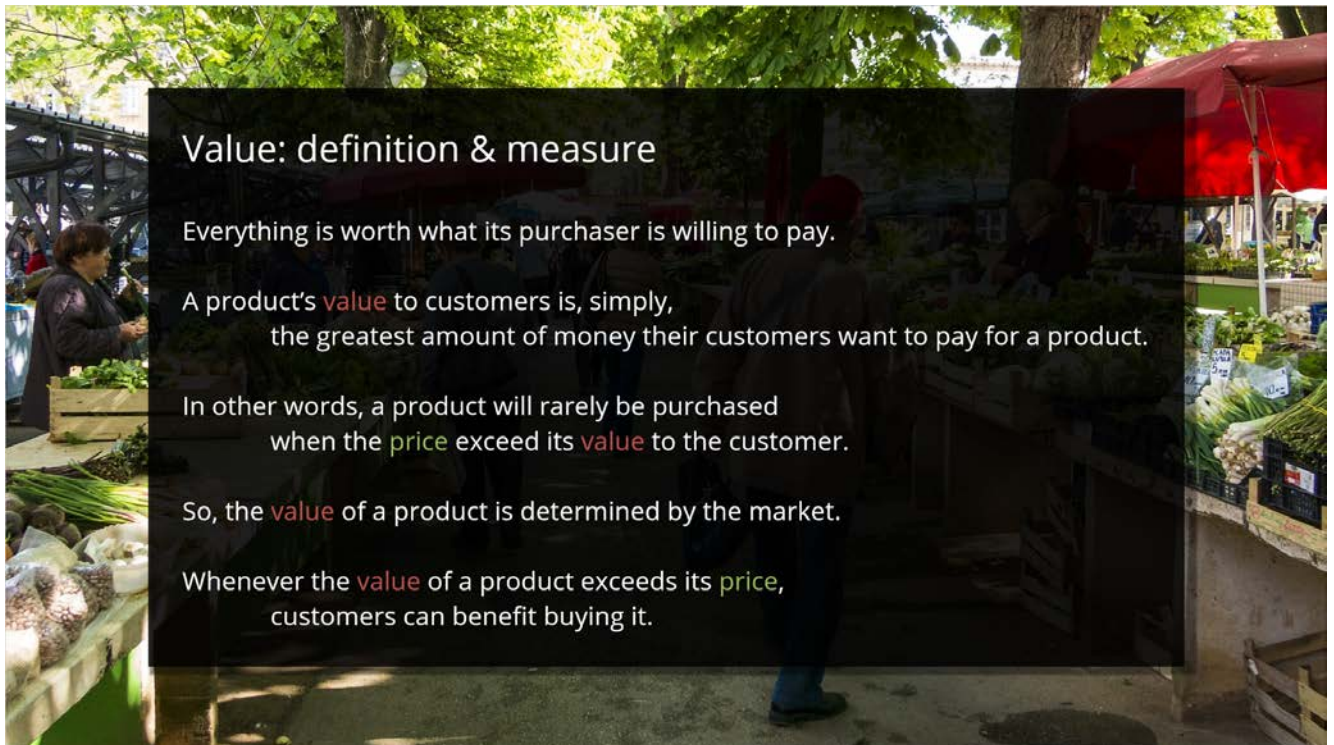

A competitive advantage is gained over competitors by offering consumers better value.

How do you define value?

Can you measure it?

What are your product and service actually worth to customers?

1.4 Definition

Notes:

Everything is worth what its purchaser is willing to pay.

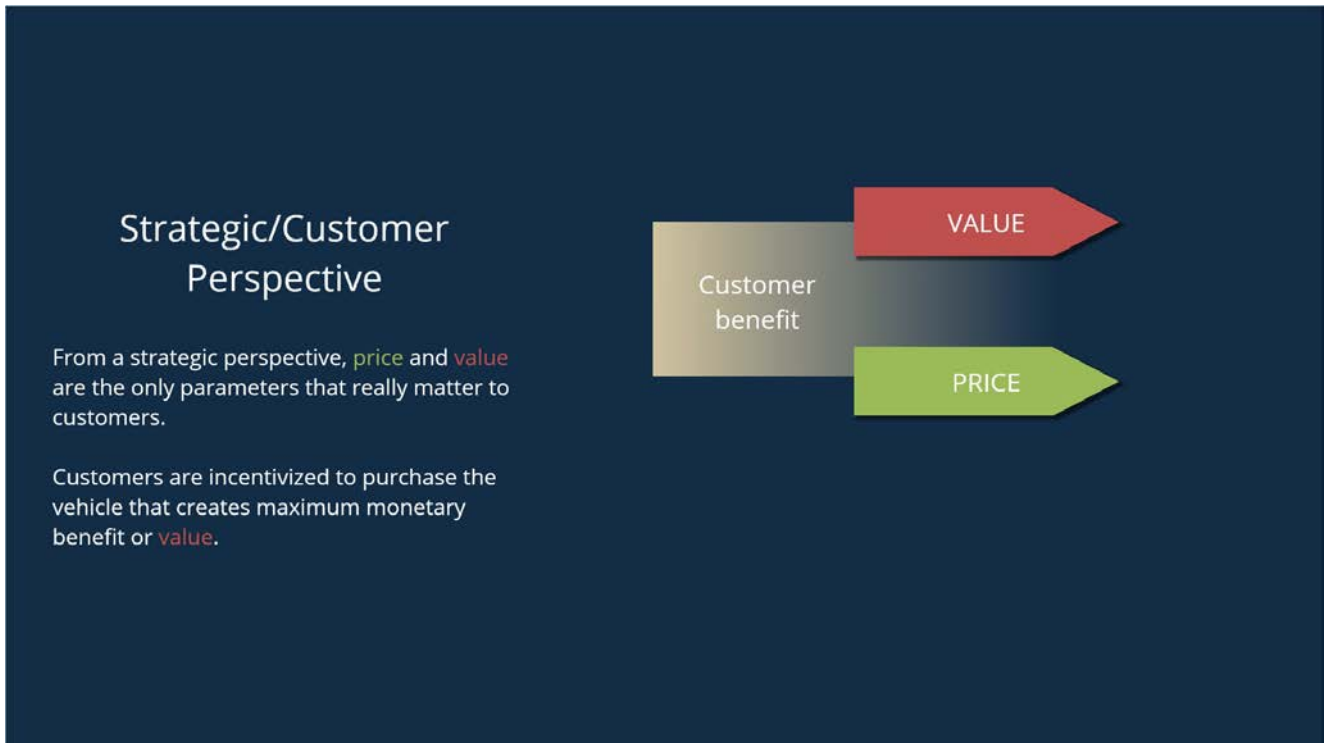

A product's value to customers is, simply, the greatest amount of money their customers want to pay for a product.

In other words, a product will rarely be purchased when the price exceeds its value to the customer.

So, the value of a product is determined by the market.

Whenever the value of a product exceeds its price, customers can benefit buying it.

1.5 Customer perspective

Notes:

From a strategic perspective, price and value are the only parameters that really matter to customers.

The difference between the value and the price is the benefit that a product brings to its customers.

Customers are incentivized to purchase the vehicle that creates maximum monetary benefit of value for the customers.

1.6 Company perspective

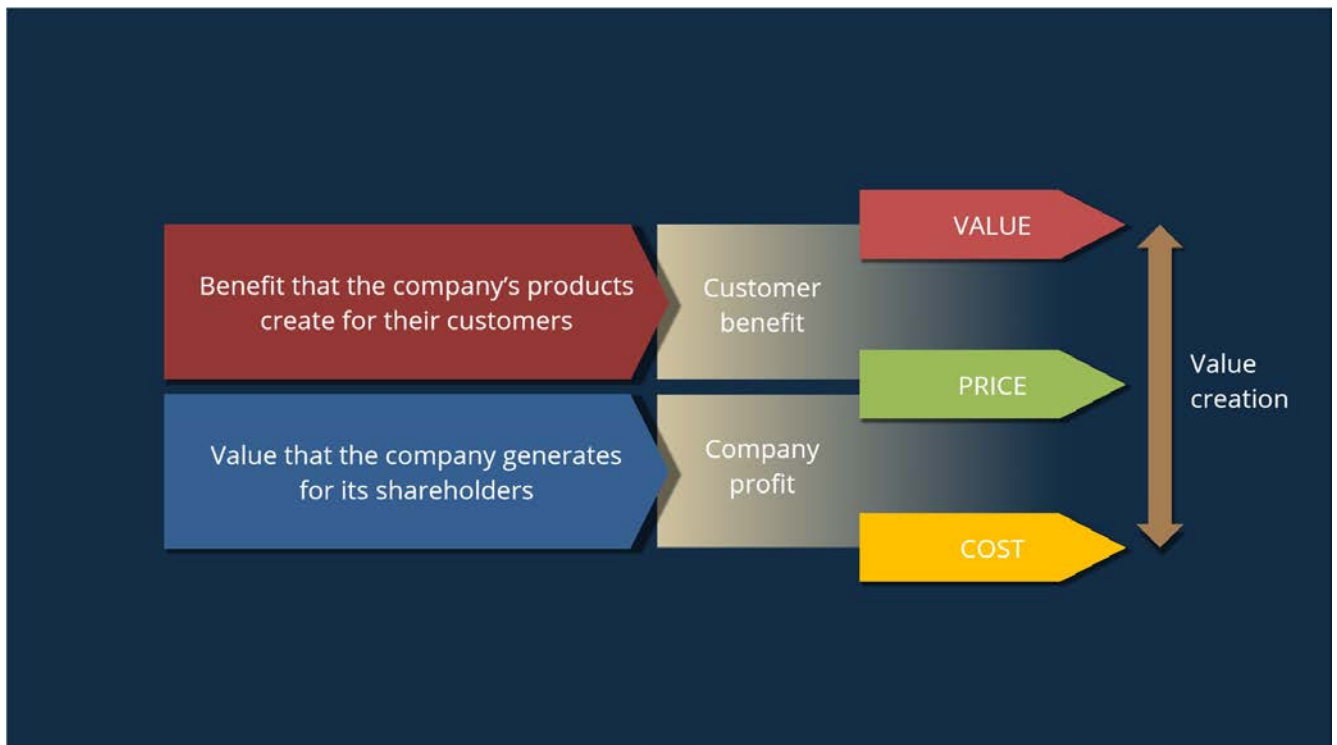

Notes:

From a company's perspective, the profit of a product is the margin between the selling price and the cost.

The overall value that a company creates includes customer value and company profit.

1.7 Two values

Notes:

The customer value represents the benefit that the company's products create for their customers and the profit is the value that the company generates for its shareholders.

1.8 Differentiation 1

Value Creation: Differentiation

A company chooses the differentiation strategy to provide more value-adding features that their customers want and are willing to pay a premium for.

For example, 2017 Lincoln Continental pickup follows the differentiation strategy.

Lincoln offers differentiating features and performance to justify the higher price.

Notes:

A company chooses differentiation strategy to provide more value-adding features that their customers want and are willing to pay a premium for.

For example, 2017 Lincoln Continental pickup follows the differentiation strategy.

Lincoln offers differentiating features and performance to justify the higher price.

1.9 Differentiation 2

Value Creation: Differentiation

When choosing a differentiation strategy, the company pursues competitive advantage by generating greater customer value over a competing product.

Notes:

For instance, a customer is willing to pay \$58,000 for the Lincoln Continental and the automaker priced the vehicle at \$52,000.

The product creates about \$6,000 net value to their customers.

When choosing a differentiation strategy, the company pursues competitive advantage by generating greater customer value over a competing product.

1.10 Price-value model

Price-Value Model

Supplier's market offer
 $\text{Value}_S - \text{Price}_S$

Next best alternative
 $\text{Value}_A - \text{Price}_A$

$\text{Value}_S - \text{Price}_S > \text{Value}_A - \text{Price}_A$

$\text{Incentive}_S > \text{Incentive}_A$

This equation conveys the message that the customers purchase a supplier's product because it exceeds the incentive of the next best alternative.

By charging a price premium for differentiating features that meet customers' desires, the company earns a higher rate of economic profit than the average competitors in the industry.

Notes:

The relationship can be described with this price-value model:
Price S and Value S are value and price of the supplier's market offer.

And Value A and Price A, are value and the price of the next best alternative.

The difference between the value and price equals the customer's incentive to purchase a product.

This equation conveys the message that the customers purchase a supplier's product because it exceeds the incentive to pursue the next best alternative.

By charging a price premium for differentiating features that meet customers' desires, the company earns a higher rate of economic profit than average competitors in the industry.

1.11 Low cost 1

Value Creation: Low Cost

A company can choose a cost leadership strategy to reduce the cost of their products

and share the value with their customer to gain competitive advantage.

For instance, the strategy of Ford Focus is cost leadership.

Notes:

A company can also choose a cost leadership strategy to reduce the cost of their products and share the value with their customer to gain competitive advantage.

For instance, the strategy of Ford Focus is cost leadership.

1.12 Low cost 2

Notes:

Ford managed to lower the production cost of Focus vehicle at \$14,000.

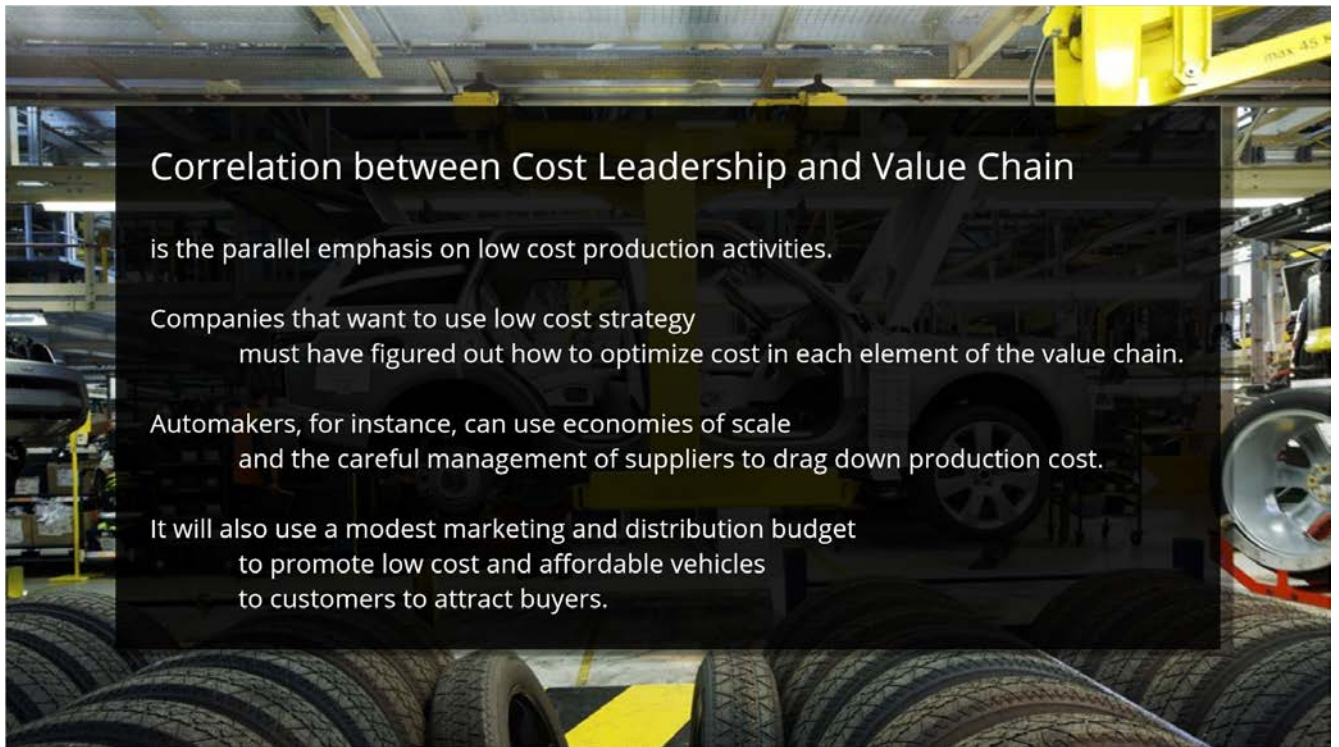

Bulk of customers are willing to pay \$20,000 for a model.

By offering a sales price of \$17,000 the company creates a \$3,000 value to its customers and also keeps \$3,000 profit.

Using the cost leadership strategy, the automaker can use its advantage, the low cost operation, to bank more profits at competitive price to increase customers and sale volume.

Customers earn value from economical purchase prices, which are lower than their budget.

1.13 Correlation

Notes:

The correlation between the cost leadership strategy and value chain is the parallel emphasis on low cost production activities.

Companies that want to use low cost strategy must have figured out how to optimize cost in each element of the value chain.

Automakers, for instance, can use economies of scale and the careful management of suppliers to drag down production cost.

It will also use a modest marketing and distribution budget to promote low cost and affordable vehicles to customers to attract buyers.
