M3L9a. Systematic Negotiation Process

Slide #1

In this topic, we will discuss the systematic negotiation process.

Slide #2

A systematic negotiation process includes four major steps.

The first step is collecting business information to prepare for the negotiation.

The second step is to analyze the information to calculate business positions of different offer options.

After that, we will engage our partners to exchange information and understand each other's business interests.

The fourth step is to make business judgment about the information that we will learn from our discussions with our partners.

It is not uncommon that we repeat the process several times to fully understand each other's business needs, limitations, and offers to reach final agreement.

The information collection and the business analysis require structured rational assessment, while the engagement and judgment steps rely on managers intuitive reasoning.

We can use a term-sheet as a framework to help us identify terms to negotiate, as well as collect business information.

Slide #4

| Terms/Issues | ir | Relative nportance (0-10) | Desired outcome | | pected tcome | Acceptable outcome | | |
|------------------------------|----|---------------------------------|---|--|-----------------|-----------------------|--|--|
| Licensed technology | | | | | | | | |
| Licensed products | | | | | | | | |
| Field of use | | | (1) company strategy statement | | | | | |
| Territory of use | | | (2) business performance objectives (3) key performance indicators (4) R&D capabilities | | | | | |
| Grant | | (4) R&D capab etc. | | | | | | |
| Milestones | | etc. | | | | | | |
| Royalty | | | | | | | | |
| Minimal annual consideration | | | | | | | | |
| IP expenses | | | | | | | | |

Here is an example of a term-sheet that we will use in technology license negotiation.

A term-sheet should include at least the following information.

The first is negotiation terms or issues which are listed in the first column of this table. For example, the license technology, royalty, and so on. Other issues we want to negotiate.

The second set of information to collect is about the relative importance of each term to our organization. Such type of information includes company strategy statement, business performance objectives, key performance indicators, research and development capabilities, and so on. These terms are rarely equally important to our company, and we need to weigh them differently when trading issues in the negotiation.

Also, we can mark what items are negotiable and what are non-negotiable. Do not forget listing those items that are not important to you, but likely important to your partners. Those items are your source of leverage.

| Terms/Issue | s | Relative importance (0-10) | Desired outcome | Expected outcome | Acceptable outcome | | |
|------------------------------|------|----------------------------------|--|------------------|-----------------------|--|--|
| Licensed technol | logy | | | | | | |
| Licensed produc | ts | | | | | | |
| Field of use | | | | | | | |
| Territory of use | Mar | ket information about | | | | | |
| Grant | | determine fair man | determine fair market value of each item | | | | |
| Milestones | | | | | | | |
| Royalty | | | | | | | |
| Minimal annual consideration | | | | | | | |
| IP expenses | | | | | | | |

The third set of information we need to collect is the market information about the product and potential partners, so that we can determine the fair market value of each item.

Each issue should include three position points.

| Terms/Issues | Relative importance (0-10) | Desired outcome | | Expected outcome | Acceptable outcome |
|------------------------------|----------------------------------|--------------------|-----|---------------------|-----------------------|
| Licensed technology | | Our wish unde | r | | |
| Licensed products | | best-case scenar | rio | | |
| Field of use | | | | | |
| Territory of use | | | | | |
| Grant | | | | | |
| Milestones | | | | | |
| Royalty | | | | | |
| Minimal annual consideration | | | | | |
| IP expenses | | | | | |

One is the desired outcome, which represents our wish under best-case scenario.

Slide #7

| Terms/Issues | Relative importance (0-10) | Desired outcome | Expected outcome | Acceptable outcome |
|------------------------------|----------------------------------|--------------------|------------------|-----------------------|
| Licensed technology | | | Most likely | |
| Licensed products | | | scenario | |
| Field of use | | | | |
| Territory of use | | | | |
| Grant | | | | |
| Milestones | | | | |
| Royalty | | | | |
| Minimal annual consideration | | | | |
| IP expenses | | | | |

The second point is the expected outcome, which represents the most likely scenario.

Slide #8

| Terms/Issues | Relative importance (0-10) | Desired outcome | Expected outcome | Acceptable outcome |
|------------------------------|----------------------------------|--------------------|------------------|-----------------------|
| Licensed technology | | | | Resistance |
| Licensed products | | | | point |
| Field of use | | | | BATNA |
| Territory of use | | | | |
| Grant | | | | |
| Milestones | | | | |
| Royalty | | | | |
| Minimal annual consideration | | | | |
| IP expenses | | | | |

The third point is the acceptable outcome, or our resistance point, or BATNA. We may have to walk away from the negotiation if the outcome is not acceptable.

Our next step is to determine the business positions of each item under different scenarios.

This is also the time to reach out to our internal stakeholders to assess their positions.

The internal negotiation is equally important and challenging as the external negotiation.

The ultimate goal of internal discussion is to formulate our internal stakeholders' positions and interests into the analysis and develop a set of unified positions.

Slide #10

| Terms/Issues | Relative importance (0-10) | Desired outcome | Expected outcome | Acceptable outcome | | |
|------------------------------|----------------------------------|--|-----------------------|-----------------------|--|--|
| Licensed technology | | | | | | |
| Licensed products | | | | | | |
| Field of use | | All fields | | | | |
| Territory of use | | | US and Japan | | | |
| Grant | | Inputs from diff | ferent stakeholders a | re | | |
| Milestones | | organically weaved into term-sheet positions. | | | | |
| Royalty | | | | | | |
| Minimal annual consideration | Fixed licensing payment | We will revisit term-sheet during negotiation should be evergreen, tailored to the point when reach agreement. | | | | |
| IP expenses | | | | | | |

For example, our Product Development Department desires to have a broad field of use, so that they can develop a product for different industries.

Our Marketing Department expects to include U.S. and Japan territories in the license, and our Accounting Department prefers fixed licensing payment, so that they can manage the budgeting and the planning well.

All of those inputs from different stakeholders are organically weaved into the termsheet positions.

We will revisit the term-sheet positions several times during our negotiation as new information comes in.

So, the term-sheet should be evergreen and tailored to the point when we reach an agreement with our counterpart.

Slide #11

| Terms/Issues | Relative importance (0-10) | Desired Expected outcome | | • | Acceptable outcome |
|------------------------------|----------------------------------|--------------------------|-----------|-------------|-----------------------|
| Licensed technology | | | | | |
| Licensed products | Emphasize one thing | g about the term-sh | neet: | | |
| Field of use | TOPS | | | | |
| Territory of use | | | | | |
| Grant | Never share your ve | rsion with your cou | ınterparı | t. | |
| Milestones | Prepare a shared ve | rsion of the term-sl | heet to c | communicate | offers, |
| Royalty | document th | e negotiation progi | ress. | | |
| Minimal annual consideration | Do not share | your version of the | e term-sl | heet. | |
| IP expenses | | | | | |

I needed to emphasize one thing about the term-sheet. The term-sheet should be your top secret.

You should never share your version of the term-sheet with your counterpart.

You should prepare a shared version of the term-sheet to communicate offers and document the negotiation progress with your partners, but do not share your version of the term-sheet with your secret information.

Slide #12

| Terms/Issues | Relative importance (0-10) | Desired outcome | Expected outcome | Acceptable outcome |
|------------------------------|----------------------------------|-------------------------|-------------------------|-------------------------|
| Licensed technology | 5 | All three | X & Y | X & Y |
| Licensed products | 5 | Battery | Battery | Battery |
| Field of use | 8 | All fields | Auto & energy | Auto |
| Territory of use | 4 | Global | US and Japan | US |
| Grant | 9 | Exclusive | Exclusive | Exclusive |
| Milestones | 5 | 2022 commercial product | 2020 commercial product | 2019 commercial product |
| Royalty | 8 | 4% | 5% | 6% |
| Minimal annual consideration | 6 | \$100,000 | \$150,000 | \$200,00 |
| IP expenses | 3 | \$50,000 | \$70,000 | \$150,000 |

I suggest you spend a couple of minutes studying the term-sheet, looking into the details of those columns.

The expected outcome, desired outcome, resistant points, and relative importance.

Study the term-sheets, understand the terms, and the logic behind the three position points of each term.
